COURSE OVERVIEW – FROM 0 TO PRO

Become a Full Stack AI Prompt/Vibe Developer

SULEI THE LAST CODE BENDER

WHAT YOU'LL LEARN

- HTML + CSS + Bootstrap + AI Prompt
- JavaScript Basics to Advanced + AI Prompt
- React.js for Frontend + AI Prompt
- Nest.js for Backend & APIs + AI Prompt
- AI Prompts to speed up development
- Real-world projects

WHO THIS COURSE IS FOR

- Beginners with no coding experience
- Students who want to learn full stack development
- Developers who want to use AI prompts in coding
- Anyone who wants to build real projects from scratch with AI

HOW THE COURSE WORKS

- Step-by-step learning
- Hands-on coding
- Small projects in each section
- Final big project (University Website + APIs)
- From basics → advanced → deployment

WHAT YOU'LL ACHIEVE

- Strong coding foundation using AI
- Ability to build full stack apps using AI
- Use AI to code smarter, not harder
- Portfolio and University projects for jobs or freelancing

Let's start this journey together From 0 to Pro – ! 🚀

WHAT IS FULL STACK AI PROMPT/VIBE DEVELOPMENT?

- Frontend (what users see)
- Backend (server, database, APIs)
- AI Prompt

Together = Full Stack AI Prompt/Vibe Development

WHAT IS AI PROMPT/VIBE CODING?

- Using AI tools to write code
- AI helps debug faster
- AI gives ideas & examples
- You guide AI with prompts to achieve what you want to achieve

WHY COMBINE THEM?

- Learn coding faster with AI
- Build real projects step by step
- Save time and reduce frustration
- Develop the *vibe* of working smarter

TOOLS & SETUP (EDITORS, BROWSERS, AI PROMPT TOOLS)

Set-up Development environment

- Google Chrome for Browser for testing https://www.google.com/chrome
- Node Installation https://nodejs.org/en
- Cursor IDE Installation https://cursor.com
- Xamp for database Installation https://www.apachefriends.org/download.html
- AI Prompt tools (ChatGPT ect)

BASIC HTML + AI PROMPT

THE LAST CODE BENDER

WHAT IS HTML?

- Stands for Hyper Text Markup Language
- Computer language used to create web pages
- It's made up of **tags** that wrap around content to give it meaning.
- Tags tell Web browser how to display a page

AI PROMPT TO GENERATE BASIC HTML PAGE

- **Prompt:**

Generate a basic HTML page with the title "Home" and an <h1> heading that says "Home Page" and comment.

HTML ELEMENTS + AI PROMPT

- Tags are the elements that create the components of a page
- Tags has opening and closing brackets like this < >
- Tags must have an opening and closing <> </>
  - Opening : <>
  - Closing: </>
- Example of basic tags:

- This is a paragraph.
- <h1>This is a heading</h1>
- This is a box or a container

AI PROMPT TO GENERATE BASIC HTML PAGE

- **Prompt:**

Generate a simple HTML page with a Div, heading, paragraph. Populate the tags with some content and use proper comments.

LINK TAG

- Link
  - Anchor tag <a>…
  - 4 kinds
    - Link to page in same page
    - Link to page in different folder
    - Link to outside webpage on the Internet.
    - Open Link on different tab

    Example: Click me

AI PROMPT TO GENERATE TAGS AND LINKS

- **Prompt:**

Generate a simple HTML page with a div, heading, a paragraph, and a link to google.com on a new tab and another link to anywhere on a different page and another link on the same page

FORM + AI PROMPT

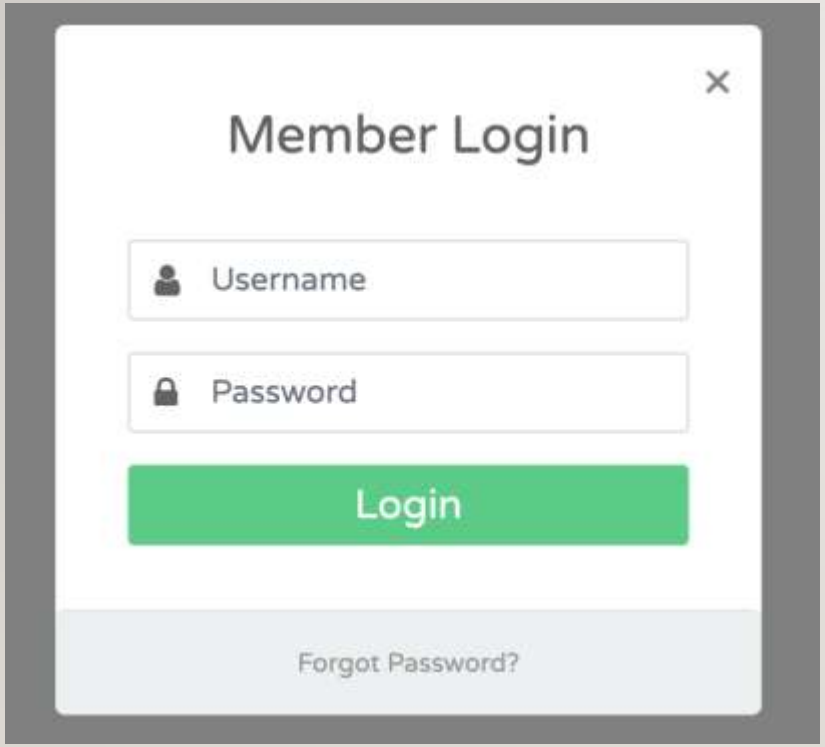

Forms are how users interact with your website and we use form to get any information from user visiting your website.

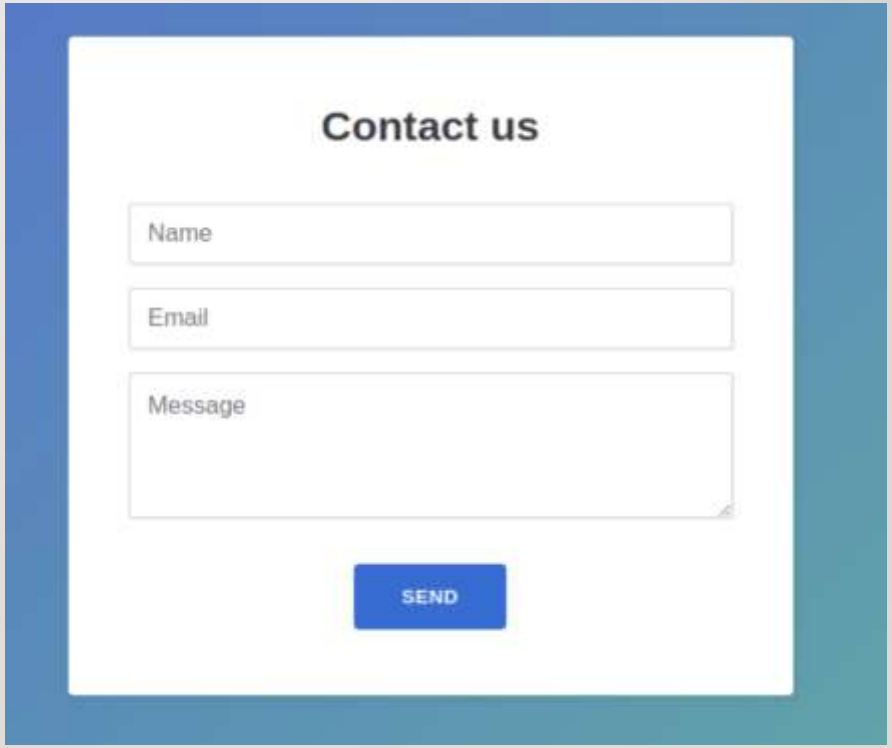

For example:

- Login pages, or Registration page.
- Contact forms,
- Search bars.

FORM + AI PROMPT

For example:

AI PROMPT TO GENERATE A FORM

☐ **Prompt:**

Generate a simple HTML page that includes a login form inside a . The form should contain:

- A heading that says “Login”
- A paragraph prompting users to enter their credentials
- Input fields for email and password
- A "Login" button

TABLE + AI PROMPT

Tables are used for displaying data, like product lists, user information etc.

For example:

#	First Name	Last Name	Email
1	Clark	Kent	clarkkent@mail.com
2	Peter	Parker	peterparker@mail.com
3	John	Carter	johncarter@mail.com

AI PROMPT TO GENERATE A TABLE

- **Prompt:**

Generate a simple HTML page that includes a table inside a . The table should contain the list of 3 user information. Without any Styling or CSS

IMAGE TAG + AI PROMPT

We use the <img> tag to display images. It's a **self-closing tag**, which means it doesn't have a closing version like </img>. Instead, it includes everything in one line.

For example:

AI PROMPT TO GENERATE IMAGE

- **Prompt:**

Generate a simple HTML page with a div, heading, that includes 2 images inside a .

Set the width of the image to be 300. Don't use any style (CSS)

UNORDERED LIST TAG + AI PROMPT

When you want to display a **bulleted list**, you use the <ul> tag, which stands for **unordered list**.

Each item inside the list is wrapped in an <li> tag which means **list item**.

For example:

```
<ul>
  <li>Item One</li>
  <li>Item Two</li>
  <li>Item Three</li>
</ul>
```

AI PROMPT TO GENERATE UNORDERED LIST

- **Prompt:**

Generate a simple HTML page with a div, heading, that includes 3 **unordered list**.

inside a . Don't use any style (CSS)

SEMANTIC HTML+ AI PROMPT

Semantic HTML means using tags that describe the meaning of the content.

Semantic HTML is important because it gives meaning to the structure of a web page. Instead of just using generic tags like , <h1> and <p>, semantic HTML uses meaningful tags like <header>, <main>, <footer>, <article>, and <section>. Here's why semantic HTML matters:

For example:

- <article> for blog posts
- <nav> for navigation menus
- <section> for sections
- <footer>, <header>, <main>

BENEFITS OF SEMANTIC HTML

- **Enhances SEO:** Search engines like Google understand your page structure, which can boost your search rankings.
- **Better Developer Experience:** Code is more readable and organized.
- **Future-Proof and Standards-Compliant:** Semantic HTML aligns with W3C standards, helping ensure your site works across different browsers and devices.
- **Reduces the Need for Extra Classes:** You often don't need as many class names to describe what an element does because the tag already conveys it.

AI PROMPT TO GENERATE SEMANTIC HTML

- **Prompt:**

Generate a simple HTML page with <header>, <main>, and <footer>. Inside the main section, include a semantic contact form with fields for name, email, and message, plus a submit button. Don't use any style (CSS)

CSS + AI PROMPT

WHAT IS CSS?

CSS stands for **Cascading Style Sheets**.

It's the language we use to **style** HTML content things like colors, spacing, borders, and layout.

- color – text color
- background-color – element background
- padding – space inside an element
- margin – space outside an element
- border – line around the element
- font-size – size of the text

See more example: https://www.w3.org/Style/CSS/all-properties.en.html#list

CSS + AI PROMPT

🎯 HOW TO ADD CSS TO HTML

There are 3 ways to use CSS:

- **Inline CSS:** inside an HTML tag Hello
- **Internal CSS:** inside a <style> tag in the HTML file

```
<style>
  h1 {
    color: green;
  }
</style>
```

- **External CSS:** in a separate .css file linked with <link>

AI PROMPT TO STYLE HTML PAGE

- **Prompt:**

Generate external styling .css file in a new css folder and style this HTML page.

CREATING A PORTFOLIO WEBSITE + AI

Learn how to build a personal portfolio website using AI prompts to speed up and guide our development.

☐ **What You'll Build**

A professional portfolio website with the following pages:

✓ Home
✓ About Me
✓ Services
✓ Pricing
✓ Contact Us

☐ WHY YOU SHOULDN'T USE ONE PROMPT TO BUILD AN ENTIRE WEBSITE

I want to share something **very important** when working with AI tools like ChatGPT, Cursor, or any code-generating assistant.

A lot of people make this mistake:

- ✕ They type **one big prompt** like:
  "Build me a complete portfolio website with five pages, CSS, responsive layout, and a form…"
- And they expect **everything** to be perfect in one shot. But here's the truth:

  ☞ **That won't work well.**

☐ WHY YOU SHOULDN'T USE ONE PROMPT TO BUILD AN ENTIRE WEBSITE

✅ **So What Should You Do?**

- **Break your website into components and pages**, then write **one small, clear prompt** for each one.
- For example:
- One prompt for the navigation bar
- Another for the Home page
- A separate one for the Contact form And so on...

That way, the AI will:

- Focus better and give you **cleaner code**
- Let you **learn** and control the process
- Help you **build your confidence** as a real developer

☐ WHY YOU SHOULDN'T USE ONE PROMPT TO BUILD AN ENTIRE WEBSITE

☐ **Remember This Golden Rule:**

- **One idea = One prompt.**
- If you keep your prompts small and specific, you'll get better results and become a better developer too.
  AI Developer or **Vibe coding Developer**

Alright! Let's jump back in and continue building our portfolio step by step the smart way. 😎

CREATING A PORTFOLIO WEBSITE + AI

☐ **Prompt Step One:**

Create a HTML and CSS PortFolio Website For a Software Developer. Start by creating the Home page only.

Populate the Home page with the following content:

- - Welcome heading
- - Short paragraph what the website is about
- - Add a placeholder for to add beautiful banner image
- - Use semantic HTML tags
- - Create a folder for CSS and Images
- - The primary color of the website should #608CF0, then use any other colors for other stuff
- - Add a lot of content to make the page look more professional and engaging
- - Make is very beautiful, professional and user friendly
- Note: Don't create any other pages, just focus on the Home page.

TheLastCodeBender

CREATING A PORTFOLIO WEBSITE + AI

☐ **Prompt Step Two:**

Update the navigation bar with links to the following pages: Home, About Me, Services, Pricing, and Contact Us.

- - Make is very beautiful, professional and user friendly.
- Note: Don't create the pages, just focus on the navigation bar.

CREATING A PORTFOLIO WEBSITE + AI

☐ **Prompt Step Three:**

Create About Me page with the following content:

- - About me heading
- - Beautiful paragraph about me
- - Professional profile image
- - Use semantic HTML tags
- - Add a lot of content to make the page look more professional and engaging
- - Make is very beautiful, professional and user friendly
- Note: Don't create any other pages, just focus on the About Me page.

CREATING A PORTFOLIO WEBSITE + AI

☐ **Prompt Step Four:**

Create Services page with the following content:

- - Services heading
- - Beautiful list of services as a software developer
- - Use semantic HTML tags
- - Add a lot of content to make the page look more professional and engaging
- - Make is very beautiful, professional and user friendly
- Note: Don't create any other pages, just focus on the Services page.

CREATING A PORTFOLIO WEBSITE + AI

☐ **Prompt Step Five:**

Create Pricing page with the following content:

- - Pricing heading
- - Beautiful list of pricing plans as a software developer
- - Use semantic HTML tags
- - Add a lot of content to make the page look more professional and engaging
- - Make is very beautiful, professional and user friendly
- Note: Don't create any other pages, just focus on the Pricing page.

CREATING A PORTFOLIO WEBSITE + AI

☐ **Prompt Step Six:**

Create Contact Us page with the following content:

- - Contact Us heading
- - Beautiful form for contact us
- - Use semantic HTML tags
- - Add a lot of content to make the page look more professional and engaging
- - Make is very beautiful, professional and user friendly
- Note: Don't create any other pages, just focus on the Contact Us page.

BOOTSTRAP

Bootstrap is a free, open-source **CSS framework** that helps you build websites quickly.
It comes with **ready-made styles** (for buttons, forms, grids, navigation bars, etc.) so you don't have to write all the CSS from scratch.

- 💡 **Why We Need Bootstrap**
- Saves **time** by providing pre-styled components.
- Makes websites **responsive** (works on mobile, tablet, and desktop automatically).
- Helps beginners build **good-looking websites** without being a CSS expert.
- Ensures a **consistent design** across your app.

CREATE A SINGLE PAGE SUING BOOTSTRAP + AI PROMPT

- **Prompt :**

Create a single page portfolio website for Web Developer suing Bootstrap.
